

# REDUCE THE SPREAD OF GERMS WITH TOUCHLESS FACILITIES

John Murphy and Company Ltd are well positioned to assist you in reducing the spread of harmful bacteria and viruses such as COVID-19

We can offer a range of affordable, zero touch solutions to meet your business needs:

- Basin taps
- Anti-bacterial soap dispensers
- WC flushing
- Automated washroom doors

## DID YOU KNOW...

Nearly 80% of illness-causing germs are spread via your hands?

Germs can survive for up to 3 hours on your hands and up to 24 hours on surfaces?

We believe that by installing touchless activation facilities, you can reduce the risk of spreading micro-organisms, instilling confidence in your employees and visitors that every effort is being made to secure health and wellbeing.

Advantages of utilising touchless activation facilities:

- No cross-contamination between users
- Pre-set water flow rate on taps reduces splashes resulting in a cleaner area
- Easily operated by users including those with limitations and mobility restrictions
- Water conservation and energy efficient solutions, resulting in long term savings
